

Algebra	Y1	Y2	Y3	Y4	Y5	Y6
language	part:part:whole model 	part:part:whole model 	RICE, part:part:whole model Bar model, for + and - integer scaling 	RICE Squared times tables eg ($2 \times 2 = 2^2$) perpendicular, perimeter, parallel, area Bar model, for \times and \div	RICE, term, algebra, formula/formulae, volume, 	circumference, diameter, radius, trapezium, derived, variable(in both mathematical and scientific sense), symbol, linear number sequence
Equations	Solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as $7 = \square - 9$ Represent and use number bonds and related subtraction facts within 20	Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and missing number problems . $13 = 9 - \square$ Recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100 $3 + 7 = 10$ $30 + 70 = 100$	Solve problems, including missing number problems , using number facts, place value $370 - \square = 300$ Solve problems, more complex addition and subtraction, involving multiplication and division, including integer scaling	Solve problems, including missing number problems , involving multiplication and division, including integer scaling, using the Bar Model for both one step and two step problems	Use the properties of rectangles to deduce related facts and find missing lengths and angles Express missing number problems algebraically $a = 170 - 49$ Enumerate all possibilities of combinations of two variables	Find pairs of numbers that satisfy number sentences involving two unknowns Use simple formulae Circle area πr^2 circumference $= 2\pi r$ (or πd) 
Formulae and sequences	Subitizing using ten frame, then $1 \times 1 - 5 \times 5$  Sequence events in chronological order using language such as: before and after, next, first, today, yesterday, tomorrow, morning, afternoon and evening	Subitizing $1 \times 1 - 5 \times 5$  Compare and sequence intervals of time Order and arrange combinations of mathematical objects in patterns	subitizing to 10×10 	use simple formulae Area of squares ($A = a^2$)  rectangles ($A = LW$)  Perimeter $2(a+b)$  To teach children elegant algebra – (perimeter can be $2(a + b)$ or $2l + 2w$).	Use simple formulae volume of cuboid $= h \cdot \dots$ parallelogram area =  triangle area $= \frac{1}{2}bh$  Finding angle on a straight line $= a = 180 - (b + c)$. Pupils draw and label rectangles (incl. squares), parallelograms and rhombuses, specified by coordinates in the four quadrants, predicting missing coordinates using the properties of shapes. These might be expressed algebraically eg, translating vertex (a, b) to $(a - 2, b + 3)$; (a, b) and $(a + d, b + d)$ being opposite vertices of a square of side d .	Trapezium $A = \frac{a+b}{2}h$  Pupils describe the properties of shapes and explain how unknown angles and lengths can be derived from known measurements. Pupils should be introduced to the use of symbols and letters to represent variables and unknowns in mathematical situations that they already understand, Generate and describe linear number sequences
End of year expectations	<ul style="list-style-type: none"> To show equations with = in a variety of places in the algorithm Subitizing in 10 frame Part:part: whole model to show all + and - 	<ul style="list-style-type: none"> Missing number problems related to + and subtraction Subitizing $1 \times 1 - 5 \times 5$ 	<ul style="list-style-type: none"> Missing number problems related to \times and division Integer scaling Algebraic language with letters substituted for numbers Bar model problem solving for + and - 	Area of squares ($A = a^2$) rectangles ($A = wl$) Perimeter $2(a + b)$ Any letters can be used in algebra BODMAS –3 stage process B, DM, AS	Volume of cuboid $= hlw$ Parallelogram area $= bh$ base \times height Triangle area $= \frac{1}{2}bh$ Straight line angle $= a = 180 - (b + c)$. Coordinates in all four quadrants Alex Parry St Bonaventure's Catholic Primary School	Circle Area πr^2 Circumference $= 2\pi r$ (or πd) Trapezium $A = \frac{a+b}{2}h$
